

DIGITALIZATION OF HEALTHCARE – THE MALAYSIAN PERSPECTIVE

Neelum Rani

Qaisara One Global Resources, Malaysia

Abstract

Healthcare systems are complex and multifaceted. We look at the application implemented by various Healthcare Centres and Hospitals focusing from Patients Data to managing Diseases from the Malaysian context.

The challenge is to streamline the gap to collaborate between Data Managers, Scientists, Doctors and Healthcare Providers to further enhance the Healthcare industry thus improving Patients' lives.

Issues to be addressed include the adoption of Digital Mindset, Supportive Ecosystem, effective implementation and ultimately Data Protection Privacy.

Also some examples of the use of App in the management of Heart Patients and managing diseases relating to huge patients' data.
